

Flexofoam

Flexofoam is our range of closed cell foam mounting material specifically engineered for corrugated post print. Designed to reduce the height of photopolymer printing plates, the flexible mounting material allows printers to achieve:

- Consistent ink coverage
- Reduced dot gain
- Less fluting on corrugated substrates
- Excellent imaging on complex print jobs

Flexofoam has excellent memory and re-bound characteristics enabling you to print with reduced pressure settings prolonging the life of the printing plate. High quality PE foam, Flexofoam is water and solvent resistant and dimensionally accurate across the web eliminating high and low spots. With high press speeds and long demanding print runs; Flexofoam is engineered to stand up to the ever increasing demands on today's printers.

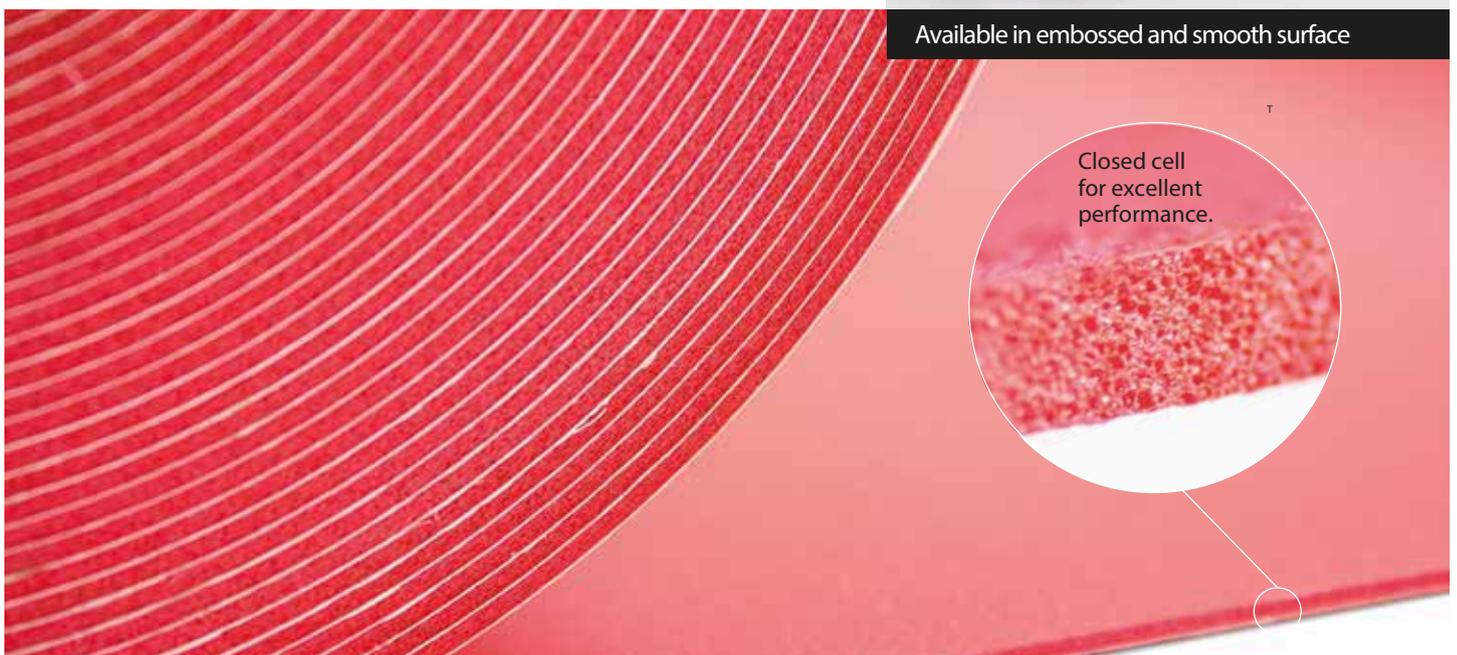

- Available in 7 thicknesses ranging from 0.8mm to 4mm
- Fixed adhesive eliminating stretch
- Flexofoam can be supported by PET up to 1650mm in width and any configuration

Bespoke laminations available, call us for details

Available in embossed and smooth surface

Closed cell for excellent performance.
