

Graffiti Removal Made Easy

GraffGo® Self Release (SR) is a single pack, anti-graffiti coating that is used to protect infrastructure from graffiti and provide easy removal of graffiti using only water. GraffGo® SR can be easily applied by roller, brush or airless spray to porous and non-porous surfaces.

- Graffiti can be removed with water and a pressure washer
- A quicker clean with minimal costs
- No need for graffiti removal chemicals
- GraffGo® SR is guaranteed for 15 years before it needs to be recoated (training is required to qualify)
- GraffGo® SR is not a sacrificial coating and only needs to be applied every 15 years
- Prevents adhesion of fly posters
- Can be used on painted and metal surfaces. Some surfaces will need the use of a primer prior to application of SR
- Environmentally friendly
- GraffGo® SR is permeable allowing the substrate to breathe
- Can be colour matched to any surface

GraffGo® SR is available in gloss and matt clear or coloured coatings. For a custom colour the minimum order quantity is 100 litres. If you intend to use GraffGo® SR on porous concrete or brickwork, you will need to use a sealant (non-darkening sealer). It will reduce the porosity and stop the colour going darker.
