

FLEXO SEALS

High precision seals with strict tolerances made of 6 different FOAM grades suitable for all applications (solvent base, water base, UV) aimed to a proper ink chamber sealing and a long lasting (up to 250-300'000 m runs).

Seals are produced with any shape on demand, using CNC technology with high cutting precision which grants a smooth contact surface seal-cylinder.

Extreme flexibility in manufacturing out of samples and drawings as well as in modifying shapes & sizes.

FOAM GRADES

FLEXP 1

medium hardness & medium density
most commonly used

FLEXP 2

high hardness & medium density
high working pressure

FLEXP 3

medium-low hardness & high density
very high wear resistance

FLEXP 4

medium-low hardness & medium density
very high wear resistance

FLEXP 8

low hardness & low density
medium working pressure

FLEXP 9

Low hardness & medium density
extreme wear resistance properties
