PORON® ThinStik™ Foams Sell Sheet

FAMILY OF SELF-ADHESIVE SOLUTIONS

As handheld devices decrease in size and increase in functionality, achieving the proper balance of sealing and protection with the requirements of an ultra thin application can be an extreme design challenge.

To help address this growing need, Rogers Corporation has specifically engineered the PORON ThinStik family of self-adhesive solutions.

THINNEST CONSTRUCTION

Rogers' unique process eliminates extra, incompressible layers of adhesive and PET, which equates to a lower compression force requirement for gaskets with similar thickness.

The compressibility that results from this space-saving process can be observed in the graph to the right.

ONE FAMILY, ONE SOLUTION

The PORON ThinStik family of materials is an all-in-one solution that combines:

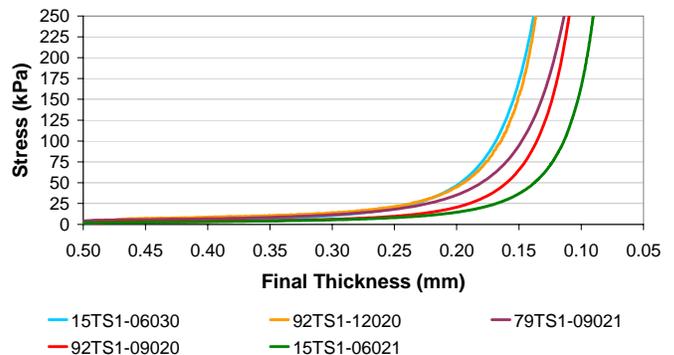

- Highly compressible PORON Foam
- Pressure sensitive adhesive layer

This innovation enables higher compressibility for ultra thin device applications and ensures reliable sealing performance for gaps as thin as 0.1mm.

LONG TERM PROTECTION AND SEALING

Due to its high compression set resistance, PORON ThinStik materials bounce back so gaskets hold their shape and seal for prolonged periods, effectively blocking contaminants and extending product life.
